U.S. AIR FORCE

Commander F. G. Jansen  
Residence Officer in Charge of Construction  
Civil Works Branch, L. A.  
Room 109, Garland Building  
117 West 9th Street  
Los Angeles 15, California

Dear Commander Jansen:

Re: Proposed 138/13.8 kv Distributing Station  
for Serving Douglas Aircraft and Other  
Commercial Loads  
(Navy Contract No. NOa-1181)

Conferences were held between representatives of the Navy, Douglas Aircraft Corporation, and the Department of Water and Power on May 22, 1952, July 17, 1952, August 19, 1952, and September 17, 1952. At these conferences, proposals and counter-proposals were made regarding the improvement of service facilities to the Douglas Aircraft Corporation Plant B6, and the problem of serving the existing loads of the synthetic rubber plants together with the probable loads to be added by the Harvey Machine Company. It is the desire of the Department to provide the utmost reliability of service to the Douglas Aircraft Corporation as well as to the existing synthetic rubber plants and to provide adequate station capacity for loads to be added by other industrial establishments in the area. Due to material shortages in effect at this time, it is felt that our combined efforts should be expended towards making full use of existing transformer capacities and facilities which are available on your property and by suitably combining them with similar equipment now installed in the Department's synthetic rubber plant industrial station, it would be possible to provide a better order of service and increased capacity for use in serving plants
